SmartBorder® ACE e-Manifest

Innovative cross-border software solutions

e-Manifest: EDI Flow

Reduce the keying effort by sending us your data for EDI integration. By sending data to our systems electronically, keying effort and human error is drastically reduced, *saving you time and money.*

In the flowchart below you can see how messages are processed.

1) Information passed from your systems into SmartBorder.

2) The information is parsed and trip and shipments are created.

3) The data is validated and sent to customs (if valid).

4) Responses from customs are processed and sent back to your systems.

"As little or as much as you have"

This system permits you to supply as much or as little of the data as you have. If there is missing information, you can login to SmartBorder and complete the required fields and transmit manually. This concept gives you the opportunity to leave your system as-is, or program your system to send us more data.

(1)

Your Freight or Order Entry System

Send Data Via FTP or Web Services → SmartBorder creates trips and/or shipments from the data sent.

(2)

Notification of "additional action is required" is returned to the calling system.

← Invalid Data — Is data valid?

(3)

Valid Data

Data is sent to Customs and response is processed

(4)

Notification of success of failure is returned to the calling system.

All status notifications are included.
